WORK EXPERIENCE

Database Developer | Flourish Worldwide, LLC | Denver, CO (Contract)

Jul 2026 – Oct 2026

- Organize and manage 250 research materials and help develop the database and knowledge system for the Flourish 360 app and research platform.
- Use document chunking, embeddings, metadata, vector search, and source citations to help users easily find and access the information they need.
- Develop an AI-powered RAG knowledge system that lets users quickly find relevant information from Flourish 360 research materials by asking questions in natural language.
- Document database structures, workflows, data connections, and technical processes to support collaboration and system maintenance.

Research Assistant & Data Analyst | Busch School of Business, CUA | Washington, DC

Apr 2025 – May 2026

- Collaborated with a faculty-led research team on the Entrepreneurship and Flourishing Around the World research project.
- Cleaned, processed, and analyzed datasets containing 900,000 data records using Python, SQL, Excel, and STATA.
- Conducted statistical analysis, correlation analysis, and hypothesis testing to identify patterns, trends, and relationships across large datasets.
- Developed machine learning models in Python to generate predictive insights and support research findings.
- Created data visualizations and research summaries to communicate analytical findings and support research outcomes.

Business Application Specialist – CSP Pega Hub | Booking.com | Vilnius, Lithuania (EU)

Jan 2023 – Dec 2024

- Resolved approximately 40–41 customer and partner cases daily, addressing account issues, Extranet system-access problems, and Pega-related inquiries.
- Documented case details and troubleshooting steps in Pega to support clear handoffs and continuity of service.
- Troubleshot technical and account issues using active listening and problem-solving skills, escalating complex cases when necessary.
- Supported customer onboarding, account configuration, and Know Your Customer (KYC) verification, while investigating and escalating potential fraud and security concerns.

Business Analyst | Cencora (formerly AmerisourceBergen) | Vilnius, Lithuania (EU)

Aug 2020 – Dec 2022

- Used SQL and PostgreSQL to query and analyze over 500,000 records, looking for trends, data issues, and performance gaps.
- Used Python and SQL to clean data and automate regular reporting tasks.
- Performed UAT and system testing on application and report changes; documented issues and helped improve data accuracy to over 98%.
- Created more than 10 Power BI dashboards to track KPIs and make business performance easier for teams to understand.
- Prepared SQL reports and analyzed KPIs to provide management with information for business decisions.

EDUCATION

M.S. in Data Analytics — The Catholic University of America, Washington, D.C.
Sept 2024 – May 2026

M.S. in Business Management — Mykolas Romeris University, Vilnius, Lithuania
Feb 2018 – July 2020

B.Sc. in Economics — University of Maiduguri, Nigeria
Apr 2010 – Jun 2015

TECHNICAL SKILLS

Data & Analytics: SQL, PostgreSQL, Oracle, Python, Excel (Pivot Tables, VLOOKUP, Dashboards), Power BI, Tableau, STATA, SPSS

Machine Learning & Engineering: scikit-learn, LightGBM, XGBoost, Apache Airflow, ETL Pipelines, REST APIs, FastAPI, Docker, Git, Linux (Basic)

Platforms & Tools: Pega Hub, Booking.com Extranet, Zendesk, B-Phone, TED, Microsoft Project, Word, PowerPoint

Professional: SaaS, Compliance, B2B Software, Team Collaboration, Documentation, Problem Solving, Customer Onboarding, Account Verification, Coaching & Support

SELECTED MACHINE LEARNING & ENGINEERING PROJECTS

Predicting Zillow Zestimate Errors | Machine Learning | github.com/chiteste4eva
Oct 2026

- Predicted Zillow's home-valuation error (logerror) on 90,275 sales using 52 property features from the Zillow Prize dataset.
- LightGBM achieved MAE 0.06822, outperforming XGBoost and a median baseline; engineered tax-assessment features carried the strongest signal.
- Built with Python, LightGBM, XGBoost, pandas, and scikit-learn; full write-up at josephnwankwo.com.

AI Early-Warning System for Recession and Inflation Risk | Graduate Capstone

- Collaborated on an economic-risk modeling project using 44 indicators from FRED, BLS, U.S. Treasury, and NBER, covering January 1990 through January 2026.
- Evaluated classification and forecasting approaches including Logistic Regression, Random Forest, SVM, LightGBM, LSTM, SVR, Ridge, and ensembles.
- Used walk-forward validation with five splits to assess temporal generalization; examined precision and recall to identify false-alarm tradeoffs.
- Incorporated Airflow, PostgreSQL, FastAPI, and Tableau into the project pipeline.

RevSymphony — AI Revenue Operations Agent

- Built an AI-powered business automation platform that automates lead qualification, customer communication, appointment scheduling, and CRM workflows using Python, FastAPI, PostgreSQL, and OpenAI APIs.

CERTIFICATIONS

RevSymphony — AI Revenue Operations Agent
May 2026

ZoomInfo DaaS Certification
Issued May 2026

AWS Cloud Services in Application Development — Accenture
May 2022
